

Alcohol

Alcohol is a central nervous system depressant. In general, the first noticeable effects of alcohol—reduced anxiety, sedation—occur when blood alcohol concentration is at 0.04 gr per 100 mL of blood.

Lysergic Acid Diethylamide (LSD)

Lysergic acid diethylamide (LSD) is the most potent hallucinogen known to science, as well as the most highly studied. LSD was originally synthesized in 1938 by Dr. Albert Hoffman. However, its hallucinogenic...

MDMA (Ecstasy)

Ecstasy is distributed in tablet form. Individual tablets are often imprinted with graphic designs or commercial logos, and typically contain 100 mg of MDMA.

Cocaine

White crystalline powder "Crack" or "rock" cocaine is an off-white chunky material. Powder cocaine is generally snorted or dissolved in water and injected.

Ketamine

Ketamine comes in a clear liquid and a white or off-white powder form. Ketamine is a tranquilizer most commonly used on animals.

Heroin

Pure heroin is a white powder with a bitter taste. Most illicit heroin varies in color from white to dark brown.

Methamphetamine & Amphetamines

Typically meth is a white powder that easily dissolves in water. Another form of meth, in clear chunky crystals, called crystal meth, or ice.

Marijuana

A green, brown, or gray mixture of dried, shredded leaves, stems, seeds, and flowers of the hemp plant. ("Cannabis" refers to marijuana and other drugs made from the same plant.)

Opium

There were no legal restrictions on the importation or use of opium until the early 1900s. In the United States, the unrestricted availability of opium, the influx of opium-smoking immigrants from East Asia, and the invention of...

Robitussin/DXM

Robitussin/DXM, then add "Robitussin is a commonly used brand of cough medicine that contains DXM. DXM, also known as dextromethorphan, is an effective cough suppressant ingredient when taken according to directions. Products containing DXM produce few side effects and have a long history of safety and effectiveness. When abused as an illicit drug, DXM is dissociative, like PCP and ketamine. Kids refer to abusing DXM (drinking a whole bottle) as robotripping.

Phencyclidine (PCP)

In its pure form, PCP is a white crystalline powder that readily dissolves in water; however, most PCP on the street contains a number of contaminants causing the color to range from tan to brown, with a consistency ranging from powder to a gummy mass.

Hashish

Hashish consists of the THC-rich resinous material of the cannabis plant, which is collected, dried, and then compressed into a variety of forms, such as balls, cakes, or cookie-like sheets.
